About these components

Some single-function components, such as buttons, have been turned into symbols for easy access from the symbol menu. Before you alter anything but text, detach the instance of the symbol so that you don't change every instance. More complex components, such as footers, have been left as groups.

Wherever appropriate, we have created type styles and layer styles to make these components more easily adapted.

Style and symbol names are a compromise between US Web Design Standards CSS naming conventions (to transition Sketch files more easily into development) and names that make sense for when thinking about screen design.

All fonts are free and open source. All but Font Awesome are available from Google Fonts. For Font Awesome, visit <http://fontawesome.io/>.
